WETLAND MITIGATION & BANKING EXPERIENCE

Multiple Mitigation Banks, James River Wetland Mitigation Technologies, Virginia

Mr. Kerr, while at another firm, managed all services in Virginia for this Wetland Mitigation Company. He negotiated the first watershed-wide Memorandum of Agreement with the Mitigation Banking Review Team in Virginia, and opened the first commercial bank in Virginia. Additional services included two site searches resulting in the identification, planning, water budgets, design and approval of two wetland mitigation banks, **Edna's Mill** and **Greenbrier Pocosin** that total 72 acres (approximately 60 credits). Both sites have met their success criteria and the Edna's Mill site's credits are now sold out. Kerr Environmental is performing monitoring and closure reports and providing additional studies in support of additional banks in multiple watersheds in Virginia.
